

## **Telehandler Training Courses Port Coquitlam**

Telehandler Training Courses Port Coquitlam - The employer has the responsibility to make sure that their personnel are trained to work competently with telehandler equipment. The personnel should be assessed for their ability to use the machinery. If deficiencies are found, employers should provide training so that staff get the needed level of skill. The responsibility level of the person should be considered when training is provided. Effective training would solve any deficiencies in the skills, understanding and knowledge of telehandler operators and supervisors. Training may be undertaken by engaging the services of an external training provider or through in-house sessions. An assessment upon completing the training period would determine if the learning goals have been met or not.

State/Provincial, local and federal rules set out guidelines for basic telehandler operator testing and training. Basic training does not deal with such subject matters as the lifting of suspended loads, the lifting of people, using other attachments, or the operation of rotating machines. Further training must be undertaken if such tasks are needed on the work location.

### **Maintenance and Inspection**

The telehandler requires routine maintenance similar to any other machinery. The machine will wear out eventually, so right maintenance is needed to guarantee the safe utilization of the telehandler equipment. Inspections and checks are vital to ongoing maintenance measures. Operators need to have machine-specific training in order to rectify, monitor and prevent problems connected with deterioration, damage and wear. Employees need competence and experience in both periodic and breakdown maintenance. The preventive maintenance directions of the manufacturer should be viewed seriously and followed, taking into account such factors as environmental conditions in the work setting and frequency of use.

The user of the machinery along with the owner of the equipment share the responsibility for ensuring that the telehandler is in full working condition. General maintenance is usually done by the telehandler owner while pre-use checks are usually performed by the user.
