

## **Forklift Instructor Training Port Coquitlam**

Forklift Instructor Training Port Coquitlam - For those lift truck operators who wish to become a lift truck instructor it is recommended that they finish a forklift Instructor training certification course. Entry qualifications for the forklift instructor training requires the forklift operator to have extensive knowledge about forklift equipment and skills driving forklifts. Instructor training usually is held at an equipment sales facility or at the campus of a junior college, community college, or technical or vocational school. Forklift manufacturing companies occasionally offer hands-on, train the trainer, practical courses.

Whether provided in a classroom environment or at a manufacturing business facility, registering for the course would involve paying a tuition fee, and buying books, manuals or other materials. Program length varies depending on the course. Individuals participating usually should have satisfactory participation, demonstration, and test scores during the program to qualify for trainer certification.

It is assumed that the trainee taking the instructor course would have past experience operating forklifts. The subjects of ethics, teaching techniques, curriculum design and safety issues will be the primary focus during the instructor training program. Individuals participating will learn how to demonstrate to their students different aspects of lift truck use, such as moving and stacking materials or navigating the forklift in narrow aisles. People participating will know how to assess student's written exams and demonstrations of their lift truck operating skills. The program goal is to be able to prepare trainers to be able to create and execute their own forklift training programs.

It is needed to carry out some self-study of the equipment and manuals. The trainers will in the end be responsible for making their own curriculum that satisfies certain guideline regulations in terms of the topics presented, such as Operation and Safety. Like for example, the topic of Safety has to comprise an understanding of how to identify potential hazards. The topic of Operation consists of instruction regarding maneuvering and steering, connecting and using instruments and controls of the fork.
